

Response to the Editor

Dear Editor,

Thank you very much for reviewing and providing comments on my manuscript. I had failed to notice that when typeset, the table I added did not properly show the payoffs to the players (each outcome mistakenly yielded player 1 a payoff of “a” and player 2 a payoff of “b”). It should now show payoffs for a traditional prisoners’ dilemma, where for each player, the payoff of defecting against a cooperator (“a”) > the payoff of both cooperating (“b”) > the payoff of both defecting (“c”) > the payoff of cooperating against a defector (“d”). I hope this fix makes the use of the game helpful in describing the role of reputation.

Thank you again very much for your comments and for the opportunity to submit this paper.
